Institute presentation

genOway is a biotechnology company dedicated to the design and creation of genetically-modified mouse models for the management of preclinical and scientific research studies. The focus of genOway is to develop highly reliable and physiological models, by combining its recognized expertise in mouse transgenesis with innovative and proprietary technologies.

Every model development project provided by genOway includes a thorough consulting activity, in order to design the best gene targeting strategies according to the client's needs.

Over the past decade, genOway has generated more than 950 transgenic mouse models, and collaborated with 13 of the top 20 pharmaceutical companies and some of the leading research institutes worldwide.
